Maya Tutor

Dear families of _____ ,
Class / Grade

Many of you have asked how to help with practice at home, especially on the evenings when homework turns into tears or “I don’t get it”.

One option I like is Maya Tutor, a voice-first AI tutor for kids in grades 1–6. Your child can ask a question out loud, and Maya explains one small step and then lets them try the next one. It covers math, science, English and more.

Why I’m sharing it

- It encourages your child to try, instead of just giving answers.
- There are no ads inside lessons.
- Photos and voice recordings aren’t kept.
- It’s a helper for home practice. It doesn’t replace what we do in class, or you.

How to start

1. Download Maya Tutor from the App Store or Google Play, or visit maya-tutor.com/teachers.
2. Create the account yourself, as the parent.
3. Enter the code _____ to get extra free lessons.

You can start with free lessons. If you later decide to subscribe, that’s your choice and it’s between your family and Maya Tutor. The school is not involved and doesn’t receive your information. Using Maya is completely optional and is not part of grading.

Please set it up together with your child and keep an eye on how they use it, as you would with any app.

Warm wishes,
